High visibility is what we do. Vinatronics, a National Safety Apparel company, has served workers in the safety industry for over 30 years. We set the benchmark for superior quality products, state of the art innovation and are recognized as an industry leader for high visibility apparel.

We believe that making quality garments here in the United States is not only important, but the right thing to do. We are proud to be part of our parent company, National Safety Apparel. National Safety Apparel has been an industry leader for over seventy eight years with ‘Made in the USA’ safety apparel.

Because Vinatronics products are made in the United States, we have one of the smallest carbon footprints of any high-visibility apparel manufacturer. Finally, our most treasured resources are the employees of Vinatronics. Their hard work and dedication to excellence are second to none.

Thank you for your business. We are honored to be your partner in safety.

Sincerely,

Duane Siders
VP of Sales and Marketing

DISTRIBUTOR INFORMATION
Contact your customer service representative for information on becoming an authorized Vinatronics Distributor. End-users contact us for an authorized distributor near you.

CUSTOM APPAREL DESIGNS
Vinatronics is proud to be the leader in custom apparel. The products listed in our catalog are just a sampling of our most popular products. However, because we manufacture all of our garments right here in the U.S., we are able to customize just about every garment to fit a specific need. For more information on our custom garments, contact one of our regional sales managers or customer service representatives. They can work with you to develop the necessary products for your specific needs.

SIZING
Keeping in mind that our products are to be worn over workwear, it is recommended to use the following sizes when ordering. We have included sizing charts based on an individual’s measurement.

PLEASe NOTE: SIZING CHARTS ARE ONLY GUIDELINES AND MAY VARY.

**DELIVERY**

The products in this catalog are stock and should have a fast delivery of one week or less. Delivery lead time for made-to-order, non-stock garments is typically 3-4 weeks.

**LOGO OPTIONS**

Customers may select multiple colors for their company logos and/or names. The most common positions are across the back (Size 8.5 x 11) and left front chest areas (Size 4 x 4). Contact a customer service representative to request a screen print estimate. Please note: acceptable art file formats are PDF, JPEG, TIFF, EPS, AI and PSD.

**LOGO APPROVALS**

All logos must be approved by the end user before manufacturing begins your order.

**RETURNED GOODS POLICY**

Returns are only available for stock products. Made-to-order, non-stock or custom items are non-returnable and non-refundable. Items with logos are non-returnable. Items must be in excellent condition and not older than 90 days. Returns must have an assigned Returned Goods Authorization (RGA) number. Vinatronics reserves the right to reject returned goods if they are not returned in excellent, like-new condition.

**CANCELLATIONS**

Cancellations of made-to-order, non-stock items will be evaluated on a case by case basis. Made-to-order, non-stock items are non-returnable and non-refundable.

**WARRANTY INFO**

Vinatronics, a National Safety Apparel Company (NSA), guarantees all of the products manufactured by it to be free from defects in material and workmanship. This guarantee applies for 90 days from date of original purchase of each product when used for the application for which it was intended and when warnings, use and care instructions are followed. With respect to any products not manufactured by NSA, NSA gives no warranty, and only the warranty, if any, provided by the manufacturer of such products will apply. In the event of a breach of the foregoing warranty, NSA’s only obligation shall be to replace such quantity of the product proven to be defective. The foregoing constitutes the exclusive remedy of the buyer or user of NSA’s products, and NSA’s sole obligation, for claims based upon defects in or nonconformity of NSA’s products. This warranty is exclusive and in lieu of all other warranties, whether oral, written, express, implied or statutory. No Implied or Statutory Warranties of Merchant Ability or Fitness for Particular Purpose Will Apply. NSA shall not be liable for any loss or damage, direct, indirect, incidental or consequential, arising out of the use of - or the inability to use - the product. Before using, users shall determine the suitability of the product for the intended use, and users assume all risk and liability whatsoever in connection therewith. Therefore, users should make careful analysis of the use for which these products are purchased. It will be the users’ responsibility to determine whether these products will adequately provide protection in the environment in which they are to be used. NSA cannot anticipate all conditions under which this information and its products, or the products of other manufacturers in combination with its products, may be used. Users are advised to make their own tests to determine the suitability of each product, or product combination, for their own purposes.
**ANSI/ISEA 107-2010**

ANSI/ISEA 107 is the accepted standard for high-visibility safety apparel. The standard was last updated in 2010. This standard outlines the details of the construction of the garment, activities where each class should be used, and percentages of high-visibility background fabric and retroreflective tape required for each class.

Below, you can find the material requirements for each class.

- **Class 1**: Provides high visibility by covering the torso.
- **Class 2**: Provides greater visibility by covering the torso with added reflective material and tape.
- **Class 3**: Provides even greater visibility by covering torso and some or all parts of the arms. Vests and sleeveless garments do not meet Class 3 requirements.
- **Class E**: Applies specifically for pants and bib overalls. When Class E high visibility pants or bib overalls are added to Class 2 or 3 garments, the complete outfit achieves Class 3.

**ANSI/ISEA 207-2011**

Unlike ANSI/ISEA 107, ANSI/ISEA 207 does not have a performance class. This standard specifies performance requirements for high-visibility vests for use by **PUBLIC SAFETY WORKERS**.

**GUIDE TO ARC FLASH - NFPA 70E**

The National Fire Protection Association (NFPA) is an international non-profit/US trade association that was created to reduce the worldwide burden of fire and other hazards by providing consensus codes and standards. The NFPA 70E standard began in 1976, and was printed for the first time in 1979. It provides a practical safe workplace relative to the hazards associated with electrical energy. The latest update came in 2012, which is the current version of the standard.

To comply with NFPA 70E, an organization is required to determine the appropriate Personal Protective Equipment (PPE) required for a task where an arc flash hazard is present by one of two methods. One method is for the organization to perform an arc flash hazard analysis and calculate the potential incident energy. Another method provided by NFPA 70E is to use table 130.7(C)(15)(a) for alternating current or table 130.7(C)(15)(b) for direct current to determine the required hazard risk category (HRC) for a specific task. These arc flash categories and their minimum requirements are shown in the table below:

<table>
